How to get your departmental web content to work for you

One department’s experience with FOAMed

Kavish Chandra¹
David Lewis¹
Paul Atkinson¹

1. Department of Emergency Medicine, Dalhousie University, Saint John Regional Hospital, Saint John, New Brunswick

Results:
Since 2018, we have published 50 RCPs and 10 learner research papers.

In the last year, the clinical pearls received 5672 views and the Cureus channel received 1143 content views. The departmental website has received views internationally.

Concept:
As medical learners progress in their training, they become lead consumers of FOAMed.

Our educational innovation concept was the introduction of two FOAMed streams into our residency program:

- Idea
- Learner
- Mentor
- FOAM content
- Research content

Methods:
Residents training in our ED were encouraged to submit a clinical pearl or research paper, along with faculty mentorship.

Conclusion:
Faculty mentorship and 2 simple platforms have enabled residents to produce their own high quality content, helping our FOAMed program and community to grow.

Feedback from learners has been positive. Learners can share their FOAMed content and research to a wider audience.
